Contribution to the project

Student Reg. No	Responsible Tasks
IT22323248	▪ Event Management System • Creation, Edit and Deletion of events • Event Approval process • Email Reminder Notification implementation • Viewing Events for all users. • Assignee of organizer to the staff advisor. ▪ Home Page ▪ About Us ▪ Event Page
IT22316622	▪ Calendar Booking • Create, Delete, Update and Block dates. • Specific features are allowed for specific roles. • Calendar booking via approved events. ▪ Profile ▪ Club and society page
IT22346254	▪ Sellers Management and Resource Allocation • Create, edit and delete resources. • Display available resources to organizers. • Allocate, update, remove resources in events. • Budget calculation for events. • Send orders to sellers. ▪ Resource Page ▪ Seller Dashboard ▪ Resource Allocation Page
IT22343048	▪ User Management • Create User and Delete Users. • Assign roles for the users. • Give authorized access to the users. ▪ Organizer management • Create, update, and delete of organizers ▪ Crew management • Create, update and delete of crew. • Adding new members to the crew. ▪ Contact Us page

Jira Board

Note: *Our Team has used Jira Board instead due to low premium restrictions and blocks unlike Azure.*

User Story example

Event View Page

+ Add @ Apps

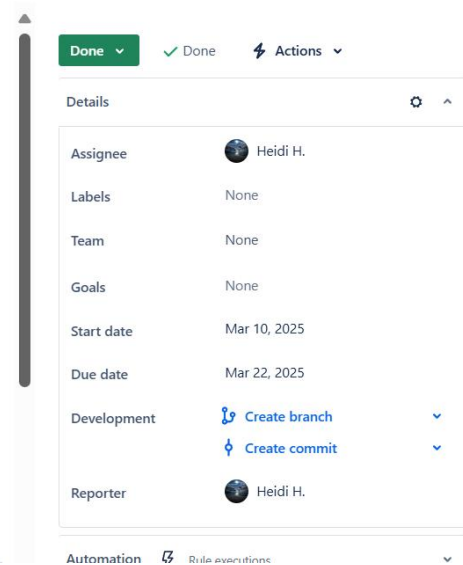

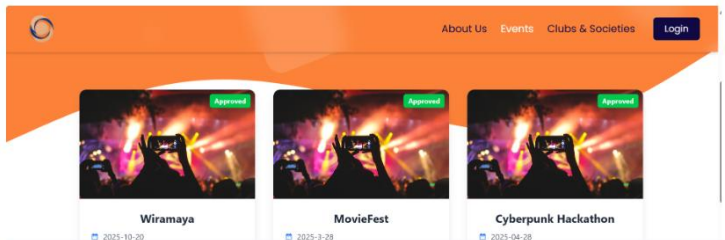

Description

As a guest viewer

I **should** see the available events

So that I can get up-to-date events.

Expected UI:

User Story on Event Page, how the event page should be created and the components needed in the page. UI styled by Figma.

Epic Work Items for each

The items are taken from a snapshot of the Lists tab section in Jira. The tasks are filtered and provided according to the items assigned to the members. (Refer Figure 1 – 4)

GitHub Link: <https://github.com/HeidiHettiarachchi/eventlink.git>

Repository view

The screenshot shows the GitHub repository interface for `HeidiHettiarachchi/eventlink.git`. At the top, there's a navigation bar with the `main` branch selected, 6 branches, and 0 tags. A search bar labeled "Go to file" is present, along with a "+" button and a green "Code" button. Below this, the repository name and the latest commit "Update: App.tsx token" by HeidiHettiarachchi are shown, along with the commit hash `66c849e` and the time "5 hours ago". To the right, it says "34 Commits". The main content area lists the repository's files and folders:

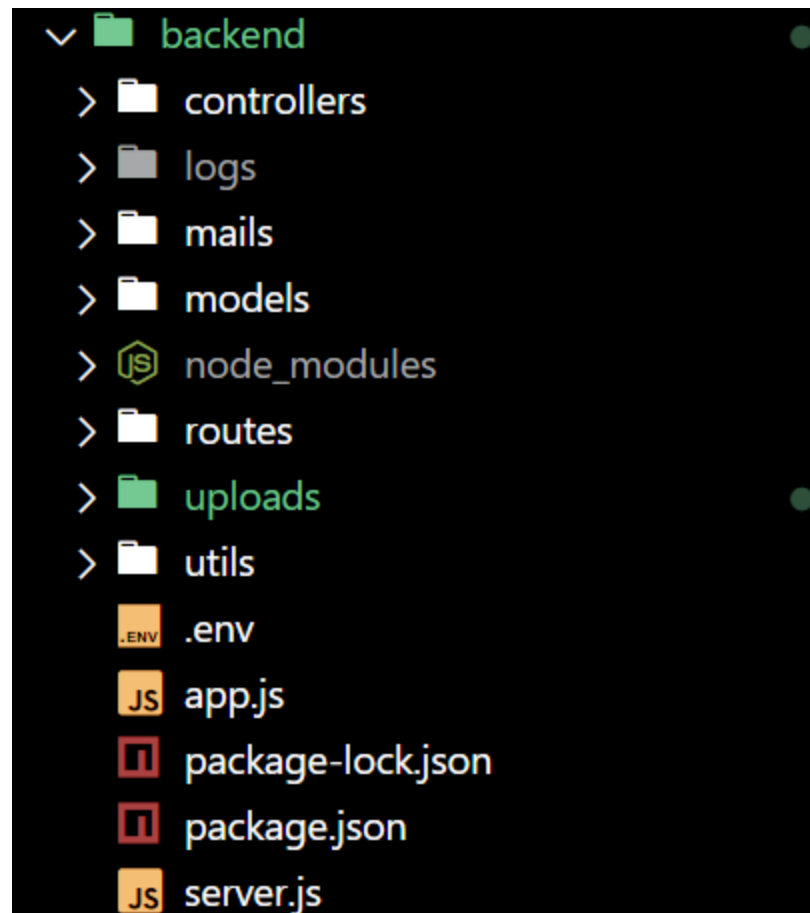

File/Folder	Commit Message	Time
backend	syncing changes	6 hours ago
frontend	Update: App.tsx token	5 hours ago
.gitignore	Updated the API endpoints	last month
README.md	Added the front end file structure	last month
package-lock.json	Nav completed	3 weeks ago
package.json	Nav completed	3 weeks ago

File setup

3. Project issues

The screenshot shows the SonarQube interface for the project 'eventlink'. The left sidebar contains a 'Filters' section with the following data:

Category	Value
Software Quality	
Security	10
Reliability	41
Maintainability	272
Severity	
Blocker	8
High	24
Medium	112
Low	179
Info	0
Clean Code Attribute	
Consistency	98
Intensivability	188
Adaptability	16
Responsibility	0

The main panel displays a list of issues. The first issue is 'Replace this "switch" statement by "if" statements to increase readability.' with a severity of 'Intentionality' and a tag of 'bad-practice'. The second issue is 'Change this code to not construct database queries directly from user-controlled data.' with a severity of 'Security' and a tag of 'cwe'. The third issue is 'Refactor this function to reduce its Cognitive Complexity from 18 to the 15 allowed.' with a severity of 'Maintainability' and a tag of 'brain-overload'.

The screenshot shows the SonarQube interface for the project 'eventlink'. The left sidebar contains a 'Filters' section with the following data:

Category	Value
Software Quality	
Security	0
Reliability	21
Maintainability	708
Severity	
Blocker	8
High	24
Medium	112
Low	179
Info	0
Clean Code Attribute	
Consistency	90
Intensivability	77
Adaptability	12
Responsibility	0

The main panel displays a list of issues. The first issue is 'Remove the declaration of the unused "error" variable.' with a severity of 'Intentionality' and a tag of 'unused'. The second issue is 'Remove the declaration of the unused "originalOrg" variable.' with a severity of 'Intentionality' and a tag of 'unused'. The third issue is 'Remove the declaration of the unused "userId" variable.' with a severity of 'Intentionality' and a tag of 'unused'. The fourth issue is 'Handle this exception or don't catch it at all.' with a severity of 'Intentionality' and a tag of 'cwe error-handling'.
